

Warm - Ups

Week 27

- **Vocabulary:**
 - Adaptation - adjustment to environmental conditions
 - Biome - a large geographical area characterized by certain types of plants and animals
- **What is an ecosystem?**
 - a) Many living things in close proximity to each other
 - b) A community of living and non-living things that live and interact with each other in a particular area
 - c) Many non-living things in close proximity to each other
 - d) A closed environment
- **What has the best chance of surviving in the desert?**
 - a) A tan coyote
 - b) A bright parrot
 - c) A black bear
 - d) A spotted leopard

- **Vocabulary:**

Climax community – the last stage of succession when plant, animals, and fungi are at their maximum level

Commensalism – relationship between two organisms when one organism benefits and the other organism is not harmed but also not helped

- A seed that would not normally grow in a hot, dry environment would most likely best grow where?

- a) Rainforest

- b) Tundra

- c) Desert

- d) Savanna

- What would most likely survive in the arctic

- a) A brown rabbit

- b) A black rabbit

- c) A white rabbit

- d) All of the above

- **Vocabulary:**

Coniferous forest – a biome that is filled with cone-bearing trees like pine trees

Deciduous Forest – a biome that is filled with trees that lose their leaves during certain parts of the year; we live on the edge of a deciduous forest biome.

- _____ contains mostly rocks while _____ is the growth of a more diverse community

- a) Secondary Succession; Primary Succession

- b) Climax Community; Lichens

- c) Climax Community; biodiversity

- d) Primary Succession; Secondary Succession

- a) After a forest fire, what is most likely to return first?

- a) Herds of deer

- b) Forests of trees

- c) Shrubs and Bushes

- d) Grasses and weeds

1. What Biome is similar to a desert, but much colder?
A. Deciduous B. Tundra C. Grassland D. Coniferous
2. What Biome has trees that produce cones?
A. Deciduous B. Tundra C. Grassland D. Coniferous
3. What biome is flat and has a similar climate to a deciduous forest but has almost no trees?
A. Deciduous B. Tundra C. Grassland D. Coniferous
4. What biome has trees that shed their leaves?
A. Deciduous B. Tundra C. Grassland D. Coniferous
5. Succession is:
A. Plants growing over time B. Animals changing over time
C. Plants changing over time D. Animals growing over time
